A difficult task made easy

Transport massive e-bikes with tips and accessories from Rameder

E-bikers ride mountains up and down as if the Yeti was behind Reinhold Messner. The high-torque motor makes it all possible. When loading a bike carrier, however, the heavy technology from Pedelecs and Co. can turn out to be a boomerang. However, if you pay attention to some tips, this becomes an easily surmounted hurdle. Rameder, Europe's leading provider of automotive transport solutions, recommends carrier systems for the towbar. The advantage: due to their significantly lower mounting height, they are a huge hit compared with roof carriers, when it comes to loading comfort. If you remove the battery and store it properly in the vehicle, you will also save weight. It is even easier and prevents back problems when you use the optional ramps. The ultimate luxury, however, is bike carriers with a built-in lift. A wide range of different bike carrier systems is available on www.rameder.eu.

Ramps are a great complement for [bike carriers](#) that are mounted on the [towbar](#). The loading succeeds this way without a need of lifting and carrying tasks. Among other benefits, this option is another plus, compared with roof or tailgate mounts. The mini-ramps are an inexpensive additional option offered by many manufacturers for their carrier systems. The compact rails can be conveniently stored in the trunk after use, where they are always when needed.

The [Bike Lift](#) available at **Rameder** on www.rameder.eu offers the ultimate in comfort with a built-in electric lift, connected via trailer socket. So the bike floats weightlessly with E-Power up or down. With a payload of 60 kilograms, the EUR 699 carrier is ideal for heavy calibres and offers two spaces for bikes.
